WO 2004/112767 PCT/US2004/019972

CLAIMS

We Claim:

1. A composition comprising at least one carotenoid and at least one phospholipid, wherein the carotenoid comprises at least 1% of the total mass and the phospholipid comprises at least 5% of the total mass, and the ratio of carotenoid to phospholipid is from about 1:100 to about 1:0.01.

- 2. The composition of Claim 1, wherein the carotenoid has a microbial source.
- 3. The composition of Claim 2, wherein the microbial source is chosen from *Phaffia*, *Haematococcus*, Schizochytrium and *Paracoccus*.
- 4. The composition of Claim 1, wherein the carotenoid is chosen from astaxanthin, zeaxanthin, canthaxanthin, lutein, beta-carotene, and lycopene.
- 5. The composition of Claim 1, wherein the carotenoid is synthetic.
- 6. The composition of Claim 1, wherein the phospholipid comprises more than about 20% polyunsaturated fatty acids having two or more double bonds.
- 7. The composition of Claim 1, wherein the phospholipid comprises more than about 10% polyunsaturated fatty acids having three or more double bonds.
- 8. The composition of Claim 1, wherein the phospholipid comprises more than about 10% polyunsaturated fatty acids having four or more double bonds.
- 9. The composition of Claim 1, wherein the phospholipid comprises more than about 20% polyunsaturated fatty acids having four or more double bonds.
- 10. The composition of Claim 1, wherein the phospholipid is of microbial origin.
- 11. The composition of Claim 1, wherein the phospholipid is an egg lecithin.
- 12. The composition of Claim 1, wherein the phospholipid has an origin chosen from fish, crustacean, and shellfish.
- 13. The composition of Claim 1, wherein the phospholipid is of mammalian origin.

WO 2004/112767 PCT/US2004/019972

14. The composition of Claim 13, wherein the phospholipid is of mammalian brain origin.

- 15. The composition of Claim 1, wherein the ratio of carotenoids to phospholipids is from about 1:50 to about 2:1.
- 16. The composition of Claim 1, wherein the ratio of carotenoids to phospholipids is from about 1:10 to about 1:1.
- 17. The composition of Claim 1, wherein the ratio of carotenoids to phospholipids is from about 1:5 to about 1:1.
- 18. An animal feed comprising the composition of any of Claims 1 to 17, wherein the carotenoid content is between about 0.1 mg and about 1000 mg per kg of feed.
- 19. The composition of Claim 18, wherein the animal is an aquatic animal.
- 20. The composition of Claim 19, wherein the aquatic animal is typically cultured below a temperature of 20°C.
- 21. The composition of Claim 19, wherein the aquatic animal is a fish.
- 22. The composition of Claim 19, wherein the aquatic animal is a crustacean.
- 23. The composition of Claim 18, wherein the animal is a terrestrial animal.
- 24. The composition of Claim 23, wherein the terrestrial animal is a bird.
- 25. A method of pigmenting an animal or animal-derived product, comprising providing a feed as described in Claims 18-24.
- 26. The method of Claim 25, wherein the animal-derived product is chosen from an egg and a processed egg product.
- 27. The method of Claim 25, wherein the animal or animal-derived product is chosen from a whole animal, the processed flesh of an animal, and a processed animal product.

WO 2004/112767 PCT/US2004/019972

28. A method of preparing an animal feed, feed supplement, or feed ingredient by

- (a) first mixing at least one carotenoid and at least one phospholipid, wherein the carotenoid comprises at least 1% of the total mass and the phospholipid comprises at least 5% of the total mass, wherein the ratio of the carotenoid to phospholipid is from about 1:100 to about 1:0.01; and
- (b) then combining the carotenoid/phospholipid mixture with animal feed, feed supplement, or feed ingredient to provide a final carotenoid content between about 0.1 mg and about 1000 mg per kg; and
- (c) then processing the feed, feed supplement, or feed ingredient into a deliverable form.
- 29. A method as in Claim 28, wherein the deliverable form comprises a pelleted feed.
- 30. A method as in Claim 28, wherein more than one carotenoid is mixed with the phospholipid.
- 32. A method of preparing an animal feed by:
- (a) first mixing at least one carotenoid and at least one phospholipid, wherein the carotenoids comprise at least 1% of the total mass and the total phospholipids comprise at least 5% of the total mass, and the ratio of the carotenoid to phospholipid is from about 1: 00 to about 1: 0.01;
- (b) then combining the mixture with a carrier in a ratio of about 1 to about 100 parts carrier:mixture; and
- (c) then coating standard feed pellets with a composition comprising the mixture and the carrier.
- 33. The method of Claim 32, wherein the carrier comprises an oil.
- 34. The method of Claim 32, wherein the coating comprises a top coating.
